

Conty 21

19. (original) The apparatus of claim 18, wherein the fixture impedance comprises a capacitor coupled between the common I/O and a fixed potential relative to the semiconductor device.

20. (new) The apparatus of claim 14, wherein the weak driver impedance includes a variable impedance.

REMARKS

Currently pending claims 1-20 are for consideration by the Examiner. Prompt and favorable examination on the merits is respectfully requested.
